- Manual and/or Powered System options available
- Maintains current type "C" cargo classification

INSTALLATION

- Includes replacement of
 - Floor panels
 - Side skirt panels
 - Bulkhead protector
- Installs using existing aircraft hard points
- Connects to existing OEM lower deck CLS power connections
- Connects to existing lower bilge drainage system

ANCRA A321 LOWER DECK CARGO LOADING SYSTEM; AFT BAY

SAFETY

Ancra's DC Brushless Power Drive Units are the SAFEST in the industry.

Only Ancra's PDUs DRIVE-STOP-HOLD and REVERSE without losing engagement with the ULD.

Only Ancra's PDUs provide variable speed to reduce wear-and-tear on other CLS hardware by reducing impact forces during loading / unloading.

Ancra's DC Brushless PDUs offer higher reliability than the complicated workings of other's AC-driven PDUs.

CERTIFICATION

- FAA and EASA certified for installation into passenger and converted aircraft
- Other civil aviation certifications available upon request
